

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of the Claims:

1. (Currently Amended) A method of presenting content data, comprising:

receiving at a client ~~in-connected to~~ a hub network a present request indicating locked content data;

checking a license corresponding to said locked content data to determine if said license permits said client to present said locked content data,

wherein said locked content data is a bound instance if said license permits presentation of said locked content data by said client connected to a hub network; and

presenting said locked content data through a presentation component connected to said client; ~~wherein said license of~~ when said locked content data is a bound to said hub network instance.
2. (Original) The method of claim 1, wherein:

said locked content data and said license are stored on said client.
3. (Original) The method of claim 2, wherein:

presenting said locked content data includes decrypting said locked content data to produce output content data and sending said output content data to said presentation component.
4. (Original) The method of claim 1, wherein:

said locked content data is stored on a server,

said server is connected to said client in said hub network.

5. (Original) The method of claim 1, wherein:
checking said license includes sending a confirm license request to said server from said client.

6. (Original) The method of claim 5, wherein:
presenting said locked content data includes receiving output content data streamed from said server to said client.

7. (Original) The method of claim 5, further comprising:
checking a revocation list to determine whether said client is included in said revocation list;
wherein said revocation list is stored on said server.

8. (Original) The method of claim 1, further comprising:
checking a revocation list to determine whether said client is included in said revocation list;
wherein said revocation list is stored on said client.

9. (Original) The method of claim 1, wherein:
said locked content data is media data.

10. (Original) The method of claim 1, wherein:
said presentation component is integral to said client.

11. (Original) The method of claim 1, wherein:
said presentation component is external to said client.

12. (Original) The method of claim 1, wherein:
said presentation component includes a television.

13. (Original) The method of claim 1, wherein:
said presentation component includes an audio speaker system.

14. (Currently Amended) A method of presenting content data, comprising:
receiving at a server ~~in-connected to~~ a hub network a present request indicating locked content data and indicating to a client ~~in-connected to~~ said hub network to present the content data;

checking a license corresponding to said locked content data to determine if said license permits said server to present said locked content data through said client,

wherein said locked content data is a bound instance if said license permits presentation of said locked content data by said server through said client connected to a hub network; and

presenting said locked content data by streaming data to said client; ~~wherein said license~~
~~of when~~ said locked content data is a bound to said hub network instance.

15. (Original) The method of claim 14, wherein:

streaming data to said client includes streaming locked content data to said client.

16. (Original) The method of claim 14, further comprising:

decrypting said locked content data.

17. (Original) The method of claim 14, wherein:

said present request is received from said client.

18. (Original) The method of claim 14, further comprising:

checking a revocation list to determine whether said client is included in said revocation list;

wherein said revocation list is stored on said server.

19. (Currently Amended) A method of copying content data, comprising:

receiving in a hub network a copy request indicating locked content data; and

copying said locked content data to produce a copy of said locked content data; ~~wherein~~
when said locked content data has is a bound instance with a corresponding license that is bound
to said hub network.

20. (Original) The method of claim 19, further comprising:

checking said license to determine if said license permits said locked content data to be
copied.

21. (Original) The method of claim 19, further comprising:

requesting a new license from a server for said copy of said locked content data;

wherein said server is in said hub network and connected to said client.

22. (Original) The method of claim 19, further comprising:

sending said copy of said locked content data to a device that is not a member of said hub network.

23. (Original) The method of claim 19, further comprising:

sending said copy of said locked content data to a client that is a member of said hub network but is not connected to said hub network.

24. (Original) The method of claim 19, further comprising:

sending a new license to a client that is a member of said hub network but is not connected to said hub network.

25. (Original) The method of claim 19, further comprising:

checking a revocation list to determine whether said client is included in said revocation list;

wherein said revocation list is stored on said client.

26. (Currently Amended) A method of distributing content data, comprising:
receiving from a providing device ~~in~~connected to a hub network, and at a receiving
device a copy of locked content data that is a bound instance bound to said hub network;
requesting a new license for said copy of locked content data; and
receiving said new license ~~that is for~~ said copy of locked content data of the bound
instance bound to said hub network.

27. (Original) The method of claim 26, wherein:
said providing device is a client in said hub network.

28. (Original) The method of claim 26, wherein:
said providing device is a server in said hub network.

29. (Original) The method of claim 26, wherein:
said new license is received from said client.

30. (Original) The method of claim 26, wherein:
said new license is received from a server in said hub network.

31. (Original) The method of claim 26, wherein:
said new license is received from an external server that is not in said hub network.

32. (Original) The method of claim 26, wherein:

said copy of locked content data has corresponding licensing authority information stored on said device, and

said new license is received from a licensing authority indicated by said licensing authority information.

33. (Original) The method of claim 26, wherein:

said receiving device is not a member of said hub network.

34. (Previously Presented) The method of claim 26, wherein:

said receiving device is a member of a second hub network, and
said new license of said copy of locked content data is bound to said second hub network but not to said hub network.

35. (Original) The method of claim 26, wherein:

said receiving device is not connected to said hub network.

36. (Previously Presented) The method of claim 26, further comprising:

checking a revocation list to determine whether said receiving device is included in said revocation list;

wherein said revocation list is stored on said receiving device.

37. (Currently Amended) A method of distributing content data, comprising:

receiving at a server ~~in~~connected to a hub network, and from a device a request for a new license for a copy of locked content data that is a bound instance bound to said hub network;

checking a root license stored on said server to determine if said root license permits said server to provide a new license for said copy of locked content data of the bound instance; and

creating said new license according to said root license;

sending said new license to said device,

wherein said new license for said copy of locked content data of the bound instance is bound to said hub network.

38. (Original) The method of claim 37, wherein:

said device is not connected to said hub network.

39. (Original) The method of claim 37, further comprising:

checking a revocation list to determine whether said device is included in said revocation list;

wherein said revocation list is stored on said server.

40. (Canceled)
